METHOD · MISSING FIELDS

What is in this sample, and what is not

Filings come from the official FloridaCommerce notices already stored in the Layoff Watch US WARN map (source FL) as of the extract date above. Tracker-only rows were not added. The window is notice dates from October 21, 2026 through November 20, 2026.

- Closure vs layoff. Florida's public table has a type column. Our stored map extract did not keep it, and a fresh pull of the official list returned HTTP 403 from this machine on November 20, 2026. Marked “Not listed in this snapshot.”
- Contact named on the notice. The list columns we parse do not include a contact, and none appears in our stored copy. We did not add a name from another source. Marked “Not listed.”
- County and street address. The stored extract has city only. Marked “Not listed.”
- Industry. Taken from the Layoff Watch US tracker when that employer and date are in the tracker. Otherwise “Not in our tracker.”
- Buyer tags. Inferred only from disclosed headcount and the tracker industry, then labeled as tags. They are not fields from the official notice.

A live Signals digest is delivered daily, not hourly, and can be filtered by state, industry, minimum headcount, and closures once that field is stored from the official list.

> Sample only, prepared November 20, 2026 for prospect review. Not a live client deliverable. For a current territory digest, contact info@layoffwatchus.com or visit layoffwatchus.com/signals.
